WORK EXPERIENCE

VISA INC., *Software Engineer*

2022-Present

- Developed a new service for the **Visa Payment Passkeys (VPPS)** project, designing and implementing **6 APIs** via a **Spring** application integrated with a **SQL** database. The service manages relationships between **millions** of unique devices, **FIDO2** authentications, and payment types, to reduce friction during consumer payment transactions.
- Proactively conducted upgrades to **JDK17** and **RHEL 8** by utilizing **OpenRewrite** recipes, successfully taking the **POC** to production and saving **30 hours** of developer effort while ensuring smooth transitions across lower environments and production servers.
- Led the development of an automated failover system for **Visa Smart Debit Credit Certificate Authority (VSDCCA)**, reducing failover time from **4 hours** of manual intervention from multiple teams to just **5 minutes**. Added the system to the deployment process, leveraging our previously unused active-passive setup to enhance deployment efficiency, resulting in a **50%** reduction in deployment time and ensuring seamless rollouts across **2** production data centers.
- Regularly handled client inquiries and collaborated with product stakeholders on the **VSDCCA** project to deliver **6** features that enhanced the client experience and maintained positive relationships with clients, contributing to a **20%** year-over-year increase in revenue.

HCL TECHNOLOGIES, *Software Engineer Intern*

2021

- Conducted comprehensive research on **5G O-RAN architecture**, proposing the adoption of testing frameworks for future development initiatives.
- Deployed and debugged health checks in the **RAN Intelligent Controller** using **Xtesting**, **Jenkins**, **Kubernetes**, **Helm**, and **Docker**, ensuring system functionality.

EDUCATION

UNIVERSITY OF TEXAS AT DALLAS, *B.S, Computer Science, Cum Laude with Honors*

2018-2021

PROJECTS

VISA GENAI HACKATHON: EMAIL ORGANIZER

2024

- Implemented a **ChatGPT API** for natural language processing to suggest rules for categorizing emails into smart categories.
- Utilized **Python** for inbox data extraction and processing, integrating with **Microsoft's Graph API** for seamless interaction with **Outlook**.

IOT ANOMALY DETECTION APP

2021

- Designed a full-stack application for processing **IoT** sensor data and detecting anomalies using **AWS services**.
- Built an **iOS** app with user authentication and real-time data visualization features using **Swift**, **AppSync**, and **Cognito**.
- Utilized statistical algorithms in **Python**, **Lambda**, and **GraphQL** to detect anomalies across datasets of over **90,000** entries.

SKILLS

- Programming Languages:** Java, Python, Swift, C#
- Web Development:** React, JavaScript, HTML, CSS
- Databases:** MS SQL
- Tools & Technologies:** Spring, Git, Jenkins, Docker, AWS
